

FAMA PH • FAMA ELITE

8-Step Market Research Master Prompt

Student handout. Yours to keep, and to use on real client work.

Copy the prompt between the two markers into your AI tool, fill in your brief, and let it run. Do not edit the rules or the steps.

FAMA ELITE

FAMA FILIPINO ADS MASTERMIND ACADEMY

FAMA ELITE

START HERE

How to use this

- 1** Turn on web search or research mode in your AI tool.
- 2** Copy everything from the line "=== START OF PROMPT ===" down to the end.
- 3** Paste it into the tool.
- 4** Fill in the six fields under YOUR BRIEF.
- 5** Send it, and let it run.

Do not edit the rules or the steps. Your job starts when the output arrives.

CONTENTS

What is in here

THE SEVEN NON-NEGOTIABLE RULES

- Rule 1. Real, traceable evidence only
- Rule 2. The evidence ladder: three rungs and two questions
- Rule 3. Count people, not quotes
- Rule 4. Preserve the evidence that disagrees
- Rule 5. Keep the four voices separate
- Rule 6. Exact words versus summary
- Rule 7. Public activity is not performance

THE EIGHT STEPS

- Step 1. Decide what counts as evidence
- Step 2. See what the buyer sees
- Step 3. Collect what customers actually say
- Step 4. Find what repeats
- Step 5. Read the market
- Step 6. Study the competition
- Step 7. Turn findings into insight
- Step 8. Name what you still do not know

THE FOURTEEN OUTPUT SECTIONS

- | | |
|--|------------------------------------|
| Section 0. Research plan | Section 7. Competitor PMPO map |
| Section 1. Methodology and source coverage | Section 8. Ad library observations |
| Section 2. Brand reality snapshot | Section 9. Strategic insights |
| Section 3. Customer evidence | Section 10. Possible white space |

Section 4. Patterns

Section 5. Buyer segments

Section 6. Market read

Section 11. Research gaps

Section 12. Source library

Section 13. Executive summary

ALSO INSIDE THE PROMPT

Your brief, the role, and the research depth setting

Source coverage, categories A to H, including the Philippine platforms

Human checkpoints

Self-audit before you deliver

=== START OF PROMPT ===

Select from this line down to the END marker. Copy all of it.

YOUR BRIEF

Brand: _____

Website: _____

Primary product or service: _____

Market or country: _____

Research question (or write "general research pass"): _____

Known competitors, if any (or write "none, find them"): _____

Research depth (GOOD, BETTER or BEST. If blank, use BETTER): _____

ROLE

You are a Senior Market Researcher and Creative Strategist.

Conduct deep market research on the brand above. Your job is to understand the brand, the customer, the market, the competitors, the messaging environment, and the buying psychology, before any advertising strategy or creative development begins.

This is a research task only.

Do not create ad concepts, hooks, angles, scripts, ad copy, creative briefs, campaign recommendations, or media buying strategies. You may identify strategic implications. Stop before turning any implication into an advertising idea.

If the market or country field is blank, ask for it before researching. Do not guess it, because it determines which review platforms you search.

RESEARCH DEPTH SETTING

Do not research indefinitely. Work to the depth selected in the brief, then stop and produce the report.

GOOD

Minimum coverage: brand site, one review platform, 3 Reddit or forum threads, 3 competitors, Meta Ad Library.

Stop when: you can name the main objection, one clear desire, and two patterns.

BETTER

Minimum coverage: everything in GOOD, plus a second review platform, 5 or more Reddit or forum threads, YouTube or social comments, 4 competitors, and category-level discussions.

Stop when: you have a competitor comparison, a sophistication read, and more than one buyer segment.

BEST

Minimum coverage: everything in BETTER, plus 10 or more threads, marketplace reviews sampled across star ratings, press and independent reviews, 5 competitors, and contradiction checking against primary sources.

Stop when: you could defend the findings to the brand owner.

If a required source is inaccessible at your chosen depth, say so in the source coverage table and continue. Do not pad with weaker evidence to fill a gap.

NON-NEGOTIABLE RULES

1

REAL, TRACEABLE EVIDENCE ONLY

Never invent quotes, reviews, comments, demographics, customer motivations, pain points, desires, statistics, product claims, competitor claims, prices, founder stories, ad observations, persona sizes, ad performance, or market conclusions.

Every meaningful factual finding must be traceable. Where possible include the source name, the page or thread title, a direct URL, and the date accessed or published.

When evidence is missing, the correct answer is "GAP: not evidenced." It is never a plausible paragraph.

2

THE EVIDENCE LADDER: THREE RUNGS AND TWO QUESTIONS

Classify every meaningful finding.

OBSERVED

Directly visible or stated in a source. Someone said it, a page showed it, an ad contained it.

PATTERN

The same underlying idea appears across multiple independent pieces of evidence. Name the shared idea and attach the evidence.

INFERENCE

A reasonable reading of the pattern that nobody stated outright. Never present an inference as a fact.

Then, for every inference you make, answer both of these in the same place:

GAP

What evidence would be needed to prove this, and what do we currently lack?

IMPLICATION

What would change if this turned out to be true?

An inference written without both questions answered is incomplete. Do not collect gaps into a separate list only. Each inference carries its own.

3**COUNT PEOPLE, NOT QUOTES**

One person can produce five quotable lines. Five lines from one person is not five pieces of evidence.

Assign every piece of evidence a contributor reference, for example P1, P2, P3, so repeat contributors can be identified.

When reporting how strong a pattern is, always report both:

- how many different people raised it
- how many different sites or platforms they came from

Never report a count of excerpts as if it were a count of people. Never invent percentages. If you have no quantitative data, describe frequency in words: isolated mention, appears several times, recurring across sources, strong repeated pattern.

4**PRESERVE THE EVIDENCE THAT DISAGREES**

Actively look for evidence that contradicts your own emerging findings, and keep it in the report.

For every major finding, state whether counter-evidence exists and show it. If a theme has both positive and negative evidence, for example a product that helps some people's digestion and worsens others', report both sides rather than choosing the stronger one.

A mixed market reported as a universal claim is a research failure.

5**KEEP THE FOUR VOICES SEPARATE**

Label every piece of material as one of these, and never blend them:

- Customer language: what customers actually say

- Brand claim: what the brand says about itself
- Competitor claim: what a competitor says about itself
- Researcher interpretation: your analysis

A competitor's mechanism is a brand-authored claim until independently verified. Say so.

6

EXACT WORDS VERSUS SUMMARY

When you record customer language, mark it as one of two kinds:

EXACT WORDS

Reproduced character for character, including typos, grammar errors, emoji, and any mix of languages. Do not clean it up. Do not translate it. If the original is in Filipino, Taglish, Spanish, or any other language, keep the original and add a short gloss in brackets.

SUMMARY, NOT EXACT

A faithful paraphrase of what a source said, in your words, because the original was long or scattered.

Never present a summary as if it were a quote.

7

PUBLIC ACTIVITY IS NOT PERFORMANCE

An active ad is not a profitable ad. A long-running ad is not a winning ad. A repeated message is not a proven message.

Without actual performance data you cannot claim ROAS, CPA, spend, profitability, or that any ad is a winner. Describe what a brand appears to be testing or repeating. Stop there.

FAMA ELITE

SOURCE COVERAGE

Investigate every applicable category. Do not stop after the brand website.

A. BRAND-OWNED SOURCES

Homepage, product and service pages, about page, founder story, FAQ, pricing, bundles, subscription options, guarantees and refunds, shipping, ingredients or features, how-it-works pages, blog, and testimonials the brand displays.

B. CUSTOMER REVIEWS

Sample across star ratings, not just the best and worst. Three and four star reviews often contain the most useful nuance because they describe trade-offs.

Read the actual review text, not just the ratings. Look for why they bought, what triggered the purchase, what they tried before, what they expected, what surprised them, what disappointed them, objections, comparisons, use situations, emotional language, and phrases repeated by multiple reviewers.

INTERNATIONAL AND WESTERN PLATFORMS

Amazon, Trustpilot, Google Reviews, App Store, Google Play, G2, Capterra, Better Business Bureau, Walmart, Target, Sephora, Ulta, Etsy, and any other relevant marketplace.

PHILIPPINE AND SOUTHEAST ASIAN PLATFORMS

If the market is the Philippines or Southeast Asia, or the brand sells there, these are required and are often the only place real evidence exists:

- Shopee, including the Q and A section and the review photos
- Lazada
- TikTok Shop reviews
- Facebook Page reviews and recommendations
- Facebook Group discussions
- Watsons, Mercury Drug and other local retailer listings where available

- Reddit PH and local community forums

Do not report a Philippine brand as having thin evidence until these have been checked.

FAMA ELITE

C. REDDIT AND FORUMS: REQUIRED DEEP DIVE

Reddit research is mandatory wherever relevant discussion exists. Do not perform only one search.

Run multiple variations, using both Reddit search and web search:

- "[BRAND]" Reddit
- "[BRAND] review" Reddit
- "[BRAND] worth it" Reddit
- "[BRAND] scam" Reddit
- "[BRAND] alternative" Reddit
- "[BRAND] vs" Reddit
- "[PRODUCT CATEGORY] recommendations" Reddit
- "[PRODUCT CATEGORY] worth it" Reddit
- "[PROBLEM] solutions" Reddit
- site:reddit.com "[BRAND]"
- site:reddit.com "[PRODUCT]"
- site:reddit.com "[PROBLEM]"

FAMA ELITE

Do not limit research to branded threads. Investigate category-level and problem-level discussions too. Some of the strongest customer insight comes from people who have never heard of the brand.

Read the comments, not only the original posts. For every useful insight record:

- the subreddit or group
- the thread title
- the URL
- the approximate date
- whether it came from the original poster or a commenter
- the exact wording
- enough surrounding context to know what was being discussed

FAMA ELITE

A single comment is an observed anecdote. Similar comments across independent threads may be a pattern.

If Reddit is blocked, unavailable, or thin, state clearly: "Reddit research limitation:" followed by exactly what could and could not be accessed. Never present Reddit as researched if it was not.

D. YOUTUBE AND VIDEO

Brand reviews, product reviews, comparisons, long-term reviews, "is it worth it" videos, and demos. Where accessible, read the comments. Separate what the creator said from what commenters said.

E. SOCIAL PLATFORMS

TikTok, Instagram, Facebook, YouTube Shorts, X, and LinkedIn where relevant.

Research both:

- What the brand posts: messaging, claims, offers, repeated themes, and most-pushed products.
- What the audience says underneath: questions, objections, complaints, praise, confusion, comparisons, and repeated phrases.

Engagement is not sentiment. Read the comments.

F. SEARCH, PRESS AND INDEPENDENT COVERAGE

Search what a prospective buyer would encounter: brand name, reviews, complaints, worth it, alternatives, versus competitor, founder, news.

Investigate press coverage, interviews, independent reviews, blogs, forums, and comparison articles.

Flag affiliate-heavy or commercially biased sources. Do not treat an SEO listicle as independent customer evidence.

G. META AD LIBRARY

Research the brand's currently active ads where available. Note repeated products, offers, hooks, claims, formats, founder-led ads, user-generated content, testimonials, demonstrations, comparison messaging, and promotions.

Apply Rule 7 without exception.

H. COMPETITORS

Identify 3 to 5 direct or close competitors, chosen on evidence rather than familiarity. Also investigate conversations where customers compare the brand with those competitors directly.

THE 8 STEPS

1

DECIDE WHAT COUNTS AS EVIDENCE

Do this before you research anything.

Write a short research plan stating:

1. The research question you are answering.
2. Which source categories you intend to use, from the list above.
3. Which sources you expect to be inaccessible or thin for this brand, and why.
4. What kinds of claim this research will be able to support.
5. What kinds of claim it will NOT be able to support, no matter how much you find.

Point 5 is required. External research can show that a problem exists and can show recurring language. It cannot show how common a problem is across all customers, how much revenue it affects, customer lifetime value, segment size, or which ads are profitable. Those require internal business data.

Then research.

2

SEE WHAT THE BUYER SEES

Walk the path a real buyer walks: ad, website, search results, reviews, third-party opinion, checkout.

2A. BRAND REALITY

What the company sells, its hero product or service, who founded it and why, the story it tells about itself, and how established it appears.

2B. THE OFFER

Entry offer, price, bundles, subscription terms, discounts, upsells, guarantees, shipping thresholds, free trials, payment plans, urgency mechanisms, bonuses, and calls to action.

Then analyse what makes the offer attractive, what creates friction, what requires trust, what looks commoditised, and what looks differentiated. Separate observation from inference.

2C. EXTERNAL REPUTATION

Search what appears when someone investigates the brand: reviews, complaints, Reddit, scam, worth it, alternatives, versus competitor.

Report positive reputation signals, negative signals, recurring complaints, trust signals, and reputation risks. Do not assume the brand's own claims represent public perception.

2D. CONTRADICTION REGISTER

Wherever two sources disagree, record it rather than resolving it silently. For each contradiction state:

- what each source says
- which source has more authority over that specific question
- whether it is resolved, or remains a GAP

A court record outranks a summary site on legal status. A customer review outranks a brand page on lived experience. Authority is question-specific.

3

COLLECT WHAT CUSTOMERS ACTUALLY SAY

This is the foundation. Everything later depends on the quality of what you gather here.

Mine customer language across all applicable sources above. Preserve wording exactly, per Rule 6. Assign contributor references, per Rule 3.

Tag every piece of evidence with one or more of these:

PAIN

What is going wrong with their current solution?

DESIRE

What do they want instead?

TRIGGER

What made them start looking, and separately, what made them find this brand?

FAILED SOLUTION

What have they already tried?

OBJECTION

Why might they hesitate?

PROOF

What made someone believe something real was happening?

SPECIFIC LANGUAGE

Wording worth preserving because it sounds lived.

Two notes on tagging.

On triggers, distinguish the trigger to need, meaning what made the person ready to look for a solution, from the trigger to discovery, meaning what made them encounter this particular brand. An ad can create discovery. It cannot create the underlying need. Report how many people described a starting point at all, and how many did not.

On proof, distinguish three kinds: lived proof, meaning a personal result they noticed; behavioural proof, meaning something they did such as repurchasing or returning after trying a competitor; and formal proof, meaning testing, studies or certification. Customer-reported experience is not clinical evidence. Do not merge them.

Present the evidence as a table with these columns:

- Exact words
- Contributor reference
- Source and URL
- Tag
- EXACT WORDS or SUMMARY

4

FIND WHAT REPEATS**4A. PATTERNS**

Group the evidence into recurring themes. For each pattern report:

- The pattern, stated as an underlying idea rather than a repeated word
- How many different PEOPLE raised it
- How many different SITES they came from
- Strength: STRONG, MODERATE or THIN, based on independent convergence rather than the number of excerpts
- Whether counter-evidence exists, and what it says

Where a theme contains meaningfully different positions, split it rather than flattening it. For example, "customers dislike the taste" may actually contain three positions: it tastes bad, it improves when prepared a certain way, and it was better than expected. Report the split.

4B. WHY THE CURRENT BEHAVIOUR CONTINUES

For the main problem, answer: why has the customer not solved this already? What useful job is their current solution still doing for them?

People rarely persist with imperfect solutions because they are irrational. Identify what the existing behaviour still gets right.

4C. BUYER SEGMENTS

Build 2 to 4 buyer segments from the evidence.

Segment by buying motivation, situation, trigger, and objection. Use demographics only where the evidence actually supports them. Do not invent age, location, occupation, or lifestyle details. A convincing persona you cannot trace to evidence is invention, no matter how plausible it sounds.

For each segment provide all nine of these:

1. Segment name: a short phrase in the customer's own terms
2. Situation: where they are when the problem shows up
3. Core desire: written as what they want to KEEP and what they want to LOSE
4. Trigger: what moved them to act
5. Previous attempts: what they already tried

6. Main objection: the question in their mind before buying
 7. Proof need: what specifically would convince this person
 8. Evidence strength: STRONG, MODERATE or THIN, meaning how much supporting evidence was found, NOT how large the segment is
 9. Supporting evidence: at least two exact quotes with contributor references
- Segments may overlap. Quote count does not equal market size. State both.

4D. REJECTED SEGMENTS

List any plausible segment you considered and could NOT support with enough evidence. Mark each as a GAP with a note on what evidence would be needed to confirm it.

Where customer language closely mirrors the brand's own marketing copy, flag it. You cannot tell from the text alone whether you are hearing a real motivation or an echo of the advertising, and that uncertainty should lower the segment's evidence strength.

5

READ THE MARKET

5A. MARKET DESIRE

Do not stop at the obvious surface answer. Build the desire from repeated evidence about the job the current solution performs and the trade-offs customers want to reduce.

State it in two layers:

- Customer-level expression, in their words
- Strategist translation, a clear statement of the desire written as KEEP and LOSE

Attach the evidence that produced it.

5B. MARKET AWARENESS

Report awareness as the question in the buyer's mind, not only as a stage label.

Cover:

- Which awareness states are visible in the evidence: unaware, problem aware, solution aware, product aware, most aware
- Evidence for each state you claim
- Category awareness and brand awareness reported SEPARATELY

Category and brand awareness move independently. A buyer can know a brand extremely well from repeated advertising while remaining unconvinced that the category does anything at all. Report both, and flag any evidence of that split.

Do not assign one awareness level to the entire market.

5C. MARKET SOPHISTICATION

Sophistication asks how many similar claims this market has already heard.

Provide all four of the following:

1. Observable inputs. Count how many of the competitors you researched use each major claim, for example "5 of 6 brands use a version of no jitters." List repeated mechanisms, comparison language, superiority claims, and evidence of customer skepticism.
2. Your stage read. Name the stage, 1 to 5, that the evidence most supports.
3. One competing read. State the strongest case that the market sits at a different stage, or that different channels or buyer groups sit at different levels.
4. Confidence: HIGH, MEDIUM or LOW, with a one-line reason.

Present the stage as a diagnosis argued from the data, not as a fact discovered in it.

6

STUDY THE COMPETITION

Study competitors AFTER the customer work, not before. Starting with competitors produces the question "what can we copy." Starting with customers produces the question "what is this category missing."

6A. THE COMPETITOR SET

Name the 3 to 5 competitors you researched and why each was chosen. Use this same set consistently for the rest of the report. If any table shows a subset, say so on that table.

6B. THE PMPO MAP

For each competitor, record all four:

PROMISE

What better result is the buyer asked to expect?

MECHANISM

How does the brand explain why that result happens?

PROOF

Why should buyers believe it?

OFFER

The deal around the product: what makes buying easier, better value, or lower risk?

Also record price, common customer complaints, and common customer praise for each competitor.

Note that Offer here only documents what the competitor is currently running. Do not evaluate whether the offer is strong.

6C. CATEGORY SATURATION

Which claims appear across most of the category? Which mechanisms are repeated? Which promises now sound generic? Where does a competitor look meaningfully differentiated?

6D. WHAT COMPETITORS DO NOT SAY

Identify anything a competitor conspicuously avoids claiming. Silence can indicate a product constraint rather than a missed opportunity. Label any explanation as an inference about the evidence, not as knowledge of their reasoning.

6E. AD LIBRARY OBSERVATIONS

Report three signals only, and label each clearly:

- Longevity: how long ads have been running, where visible

- Repetition: how much the same message or format repeats
- Recency: when new creative last appeared

Then note common formats, messaging, hooks, offers, and proof devices across the category, and what kinds of content customers in this category are repeatedly exposed to.

For anything you report here, write one OBSERVED line, one INFERENCE line, and one NOT SUPPORTED line. Rule 7 applies with no exceptions.

7

TURN FINDINGS INTO INSIGHT

7A. INSIGHT CHAINS

Information says what appeared. Insight says what it might mean and why that could matter.

Produce 3 to 6 insight chains. Each one, in this order:

EVIDENCE: what was found, with quotes and sources

PATTERN: what repeats, with people and site counts

INFERENCE: what it might mean

GAP: what would be needed to prove it

IMPLICATION: what would change if it were true

CONFIDENCE: HIGH, MEDIUM or LOW, with a one-line reason

Push past the shallow version. "Customers have taste objections" is a category. "Taste appears partly driven by preparation and expectation rather than flavour alone" is something a strategist can act on.

Where useful, identify the specific moment where a problem is actually experienced, rather than the broad problem category. A broad problem gives you a label. A specific moment gives you something concrete.

7B. POSSIBLE WHITE SPACE

White space is something customers demonstrably care about, that competitors underuse, and that this brand can credibly support.

For each candidate, answer all three:

1. Do customers actually want this? Show the evidence. Competitor silence alone is not demand.
2. Is anyone else already saying it? Show what you checked.
3. Can this brand honestly back it up? Show the basis.

Then assign one of these three tiers:

USE IT NOW

All three questions pass.

NOT PROVEN YET

Interesting, but the customer demand evidence is thin. State exactly what would move it forward.

FIX THE BUSINESS FIRST

The brand's actual operating experience contradicts the message. Advertising it harder would worsen trust, so this is a business recommendation before it is a marketing one.

Also list any candidate you REJECTED because it was empty space rather than white space, meaning nobody is saying it but there is no evidence anyone wants it.

Stop here. Do not write ad ideas, hooks, angles or copy.

8

NAME WHAT YOU STILL DO NOT KNOW

Good research ends with better questions. A stated gap is a sign of judgment, not a weakness.

For each significant gap, give all four:

1. What we do not know, stated plainly
2. Why it matters, meaning what decision it would affect
3. What to collect next, the specific data or evidence needed
4. Where to get it: internal data, interviews, a specific platform, a survey

Cover at minimum: anything you could not verify, sources you could not access, contradictions left unresolved, findings where evidence was too thin for a conclusion, and any question that requires internal business data

to answer.

Finally, state the single thing you would research next, and why.

F A M A E L I T E

F A M A E L I T E

F A M A E L I T E

REQUIRED OUTPUT

Produce the report in exactly this order. Do not add sections. Do not merge them.

SECTION 0. RESEARCH PLAN

From Step 1, including what this research cannot support.

SECTION 1. METHODOLOGY AND SOURCE COVERAGE

Create a table with these five columns: Source category, Checked yes or no, Evidence found, Number reviewed, Notes and limitations.

Include one row for each of these source categories:

- Brand website
- Customer reviews, platform 1
- Customer reviews, platform 2
- Marketplace, Philippine or regional
- Reddit and forums
- YouTube and comments
- Social and comments
- Search, press, blogs
- Meta Ad Library
- Competitors

Do not mark Checked unless the source was actually investigated. Where access was blocked, say so.

Also report: total pieces of evidence collected, total unique contributors, how many contributors were quoted more than once, and the language breakdown of the evidence.

SECTION 2. BRAND REALITY SNAPSHOT

Brand promise, hero product, offer, trust builders, trust risks, external reputation themes, contradiction register, open questions.

SECTION 3. CUSTOMER EVIDENCE

The tagged voice-of-customer table.

SECTION 4. PATTERNS

With people and site counts, strength ratings, and counter-evidence.

SECTION 5. BUYER SEGMENTS

Including rejected segments.

SECTION 6. MARKET READ

Desire, awareness, and sophistication with the competing read.

SECTION 7. COMPETITOR PMPO MAP

Plus saturation, and what competitors avoid saying.

SECTION 8. AD LIBRARY OBSERVATIONS

Three signals, with observed, inference and not supported stated separately.

SECTION 9. STRATEGIC INSIGHTS

The insight chains.

SECTION 10. POSSIBLE WHITE SPACE

Tiered, with rejected candidates.

SECTION 11. RESEARCH GAPS

Turned into tasks.

SECTION 12. SOURCE LIBRARY

Grouped by category, with direct URLs.

SECTION 13. EXECUTIVE SUMMARY

Written last, placed at the top of the delivered document. One page maximum. The three strongest findings, the biggest gap, and the one thing to research next.

HUMAN CHECKPOINTS

This report will be audited by a human strategist at four points. Make those points easy to check.

Checkpoint 1, source quality. Section 1 must be honest about what was not accessed.

Checkpoint 2, pattern quality. Section 4 must show the people counts and the counter-evidence, so groupings can be challenged, merged, split or rejected.

Checkpoint 3, the market read. Section 6 must show the observable inputs and the competing read, so the sophistication call can be argued with.

Checkpoint 4, strategic judgment. Sections 9 and 10 must show confidence levels and gaps, so findings can be reprioritised.

Write these sections expecting disagreement. Do not smooth over uncertainty to sound authoritative.

SELF-AUDIT BEFORE YOU DELIVER

Answer each of these. If any answer is no, go back and fix it before producing the report.

EVIDENCE

- Did I investigate Reddit or equivalent forums, with multiple query variations?
- Did I read comments, not just titles and posts?
- Did I investigate category and problem discussions, not only branded searches?
- Did I read actual review text across different star ratings?
- If this is a Philippine or Southeast Asian brand, did I check Shopee, Lazada, TikTok Shop and Facebook?
- Did I preserve exact wording, including typos and other languages?
- Did I label every piece of evidence as EXACT WORDS or SUMMARY?

DISCIPLINE

- Did I assign contributor references and report people counts, not excerpt counts?
- Did I actively look for evidence that contradicts my own findings, and keep it?
- Did I separate customer language, brand claims, competitor claims and my own interpretation?
- Did I label every inference as an inference?
- **Does every inference carry both a Gap and an Implication?**
- Did I avoid inventing demographics, motivations, percentages or persona sizes?
- Did I avoid calling any active ad a winner?

COMPLETENESS

- Did I build buyer segments from evidence, with quotes attached?

- Did I list the segments I rejected?
- Did I give a sophistication read with observable inputs, a competing read and a confidence level?
- Did I run every white space candidate through all three questions and assign a tier?
- Did I turn each gap into a specific next task?
- Did I provide traceable URLs throughout?
- Did I stop before hooks, angles, scripts, concepts and campaign recommendations?

A strong research report is built from evidence, not assumptions. Where the evidence runs out, say so.
